PILOT COMPLETE

Field Desktop Refresh

Huge performance uplifts with Dell Pro Max Slim replacing legacy OptiPlex towers.

47th Precinct Field Test

Side-by-side comparison between legacy OptiPlex 7010 and the new Dell Pro Max Slim (Intel Core Ultra).

Key Platform Upgrades

Intel Core Ultra & DDR5

Jumps multiple CPU generations ahead (from 6th/7th gen). Supports up to 128GB DDR5 and dedicated NPU for accelerating AI-enhanced applications.

Firmware Security

Moves from basic TPM 1.2 to **TPM 2.0 with SafeID and SafeBIOS**. Provides off-host BIOS verification and resilience against firmware-level attacks.

Self-Encrypting Storage

Opal/FIPS self-encrypting NVMe SSDs for stronger, hardware-based data protection without taxing the CPU.

Executive Takeaway

This refresh is an investment in endpoint resilience and productivity. It lowers security risk at the device layer, drastically reduces user downtime (officers waiting on computers), and provides a Windows 11-ready platform capable of supporting AI-enhanced workflows over the next 4-5 years.
