Vs. Business as Usual

Security & Cyber Resilience

Zero-Trust Architecture
Implemented across both server and storage layers. Immutable hardware root of trust.

End-of-Life Mitigation
Eliminates unsupported legacy hardware (Gen10, VMAX, Unity) vulnerable to ransomware.

Firmware Defense
Desktops upgraded to SafeBIOS and TPM 2.0; servers utilizing iDRAC lockdown.

Performance & Efficiency

Massive Compute Uplift
New Dell servers provide 2.4x more CPU throughput using fewer sockets.

Desktop App Acceleration
DAS boot times reduced from >3 minutes to 10 seconds for field units.

Footprint Consolidation
Storage arrays reduced by a 3:1 ratio (68%), recovering prime data center real estate.
