PLANNING PHASE

Data Center Storage Refresh

Migrating legacy VMAX, Unity, XtremIO to modern PowerMax & Isilon arrays.

Architecture Consolidation

Current infrastructure is a disparate combination of 5-10 year old isolated environments (VMAX, Unity, VNX, XtremIO). Re-designing to a centralized, high-end architecture reduces equipment, simplifies management, and significantly improves defense against cyber threats and ransomware.

Legacy (Decommissioning)		Future State (Deploying)	
5x	VMAX Arrays	3x	PowerMax Arrays
11x	Unity Arrays	1x	PowerMax Expansion
8x	XtremIO Arrays	8x	Isilon Storage Arrays
6x	VNX Arrays	4x	Data Domain Backups
2x	Data Domain Backups	2x	DD Expansions

Efficiency Savings

Metric	Current	Proposed	Reduction
DC Cabinets	34	11	68% ▼
Cooling (BTU/Hr)	400,167	123,311	69% ▼
Power (W)	120,149	36,145	70% ▼

Financial (TLA Impact)

Total Project Spend

$45.8M

Capital: $30.9M | Support: $14.5M

Software TLA Savings

$17.3M Saved

Cost reduced from $50.5M (BAU) down to $33.1M (TLA) over 5 years.

Cyber Resilience

- **Immutable Snapshots:** Secure data erasure and Cyber Recovery Vaults with logical air-gapping.
- **Compliance:** PowerMax is STIG-hardened and FIPS 140 compliant.
- **Threat Detection:** AI-driven real-time malware anomaly alerts.
